

ABSTRACT OF THE DISCLOSURE

The embodiment of this invention is disclosed, which describes a storm shutter system, which allows easy installation and removal by the homeowner. This invention does not add anything to the window and does not require the homeowner to change the window or drill holes into the home in order to install this device. The device is installed in a temporary fashion using the existing screen track of the existing window. One side of the device used a bar, which remains, in a fixed position and the other side uses a bar with slots to allow lateral movement to insure custom fit of the device.
